Progress Report #1
Team: Six
Project: Gobblin' Ghouls and Ghosts!
Members: Jesse Vasquez, Jozef Gertz, Shane Kelley
Date: September 22nd, 2021

The Plan
For the past weeks, the team decided that the course of action would be to create the skeleton project and create the restaurant's database. This would include all of the forms and the necessary code to be able to navigate between them.

The Work
Jesse's Portion:
- Put together the forms that administrators will use to manipulate the tables in the database.
- Wrote the code necessary to get to the forms from the main menu.
- Created the database.

Jozef's Portion:
- I have designed the Entity Relationship Diagram for the database.
- I have made the skeletons for the Login and Registration forms and included code that ties them together.

Shane's Portion:
- I made mockups of the Products form, Login form, and the Main Menu form.
- I then created the background image that the forms would use as well as the restaurant logo.
- I found a few royalty-free Halloween assets and then added shadows and lighting to them.
- Afterwards, I made basic forms for the Main Menu, Products, and the About pages.

The Summary
We met our goal before time and completed more than we initially thought as the team not only built the database, but was able to display sample data in the shopping menu. We have already added

the assets to fit our Ghost theme, so now the team will collaborate for further steps and divide the workload until we reach the Alpha Build stage.
